

Zoom Security Updates

Zoom has taken several steps to improve security with its application.

- Meeting passwords
 - Participants will need the password to join the meeting
- Waiting room
 - Participants will be placed into a waiting room until admitted to the meeting
- Lock Meeting
 - Meeting can be locked so no one else can join
- Remove participant
 - Participants can be moved to the waiting room or removed altogether
- Screen sharing
 - Participants can be given the ability to screen share or have it removed
- Chat
 - Participants can be given the ability to chat or have it removed
- Meeting encryption
 - Encryption has been upgraded to AES 256-bit GCM
- Data center regions
 - The data center region that handles traffic for your meeting can be limited. For example, it can be limited to the US region only
